Assignment 3

Neural Networks : Fall 1400 : Dr. Mozayani
Due Saturday, Azar 12, 1400

Contents

Problem 1	2
Problem 2	2
(a)	2
(b)	2
Problem 3	3
Problem 4	3
Notes	3

Problem 1

Consider the following inputs:

$$I_1 = [1 \ 0]^T, \ I_2 = [0 \ 1]^T \text{ and } I_3 = [1 \ 1]^T.$$

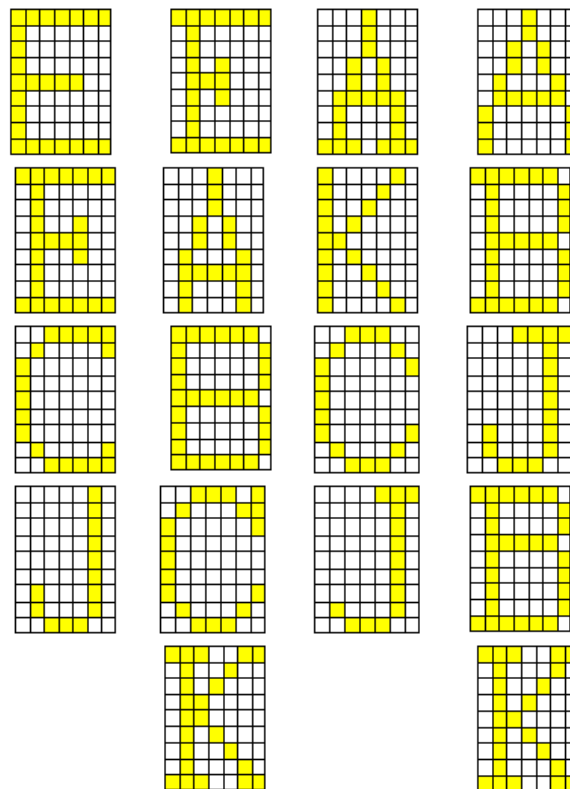

Using the Kohonen learning algorithm, train a network for a single epoch ($\alpha = 0.2$). Assume an initial weight matrix as:

$$\begin{bmatrix} \sqrt{2} & 0 \\ 0 & \sqrt{2} \end{bmatrix}$$

Problem 2

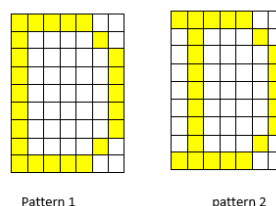

(a)

Train a Kohonen grid with the dimensions of 9×7 using the following patterns. Then, indicate how these patterns will be categorized after training.

(b)

How will the trained network predict the category of the following patterns?

Problem 3

Explain the applications of an SOM network. Furthermore, state that why an SOM can be used in those areas.

Problem 4

Please refer to the attached NN_HW3_Hopfield notebook.

Notes

- Codes should be implemented in .ipynb format (notebooks)
- All Code cells should be executed before turning in the assignment (Make sure your outputs are there before you submit your assignment)
- Please explain the code and the results in the notebook
- We will not answer any further questions as comprehension of the questions is part of your overall score
- Please upload your assignments as a zipped folder with all necessary components
